I don't really know what's going on, *but I don't object to it* either.

I believe if we have one more "don't object" one of us gets to declare stalemate..? ;)

I agree that "resistant" was a poor choice of words. They should have used something directly from the Tier IV self certification statement in the RMD.

Unless anyone objects, I'll let ASPCRO know that we think it's confusing.

Thanks,
John

I think that makes the resistant comment misleading though and it may help to update that portion.
And I don't recall off the top of my head regarding your question Bill.

The Tier 4 units are not tested. They are attested to in a limited way, which might be the source of the "Resistant to opening" comment.

There are d-Con Brodifacoum products listed as being available. Have they registered any in ≥8-lb ag-only or ≥16-lb professional size classes or do they still only have the smaller packages?

Subject: [ASPCRO] Rodenticide Mitigation Decision Fact Sheet

Attached is the ASPCRO Rodenticide Mitigation Decision Fact Sheet that was specifically designed to give regulatory officials more clarification on product label changes for controlling commensal rodents (Norway rats, roof rats and house mice only). It covers First Generation Anticoagulants, Second Generation Anticoagulants and Non-Anticoagulant products. The fact sheet does not cover non-commensal rodenticides labeled for voles, ground squirrels or pocket gophers and does not include commensal rodent tracking powders. The fact sheet does include several useful websites for further useful information.

I believe this fact sheet will be a valuable tool for the regulatory community. Please feel free to contact me with any questions or concerns. Enjoy and everyone have a great weekend.
